VirtualCTO

Managing staff in a post covid world.

Do you need a virtual CTO?

You are faced with a new way of working in the post covid world. More of your staff are working remotely than ever before and suddenly you are much more reliant on technology than you were before. You need someone who is very familiar with this way of working and knows how to manage staff in these new circumstances.

Hiring a full time CTO is an expensive and complex proposition and you are not even sure you need one anyway. However you do need someone to come in for a couple of days a week and get you up to speed with your technical implementation needs.

Is the software development house you are using the best one? How do I make sure they will deliver what they say they will, when they say they will? What are they delivering exactly anyway? What about this term called agile? Should I be hosting my product in the cloud? What do they mean when they talk about DevOps?

If this sounds like you then call or email us today!

CTO Services

We supply top quality virtual CTO Services on a monthly subscription basis.

For a fixed monthly fee* you get:

- The right to use the virtual CTO as your company CTO on all internal and external correspondence.

- 2 days of virtual CTO on site or off site consultancy per month.

- Try before you buy. Why not meet up – the first hour is free!

- *Prices on request. T's & C's apply.

VirtualCTO

About the CTO

CTO and Technical Director since 1999 with over 30 years experience in ICT related technologies. Start up and corporate business experience at retail, auto-id (RFID & barcodes), mobile radio, smart sensors, IoT and telecommunications related businesses. Brendan specialises in business and technical requirements gathering and analysis, technical/ operational management, and technical design architecture and drafting of complex business systems.

Agile management methods, Professional Scrum Master, DevOps CI/CD pipeline implementation, ITIL, PMP, mobile internet and smartphone application development management, Telecommunications and Internet Security (Public and Private Key Security Systems), GSMA, 3GPP and ETSI standards.

Case Study: 10n2 Technologies – Anti-Distracted Driving Apps and Central Device Management System

From the first time the idea was framed, through several pivots and finally to commercial reality, this suite of mobile apps & CMS required a high level of technical proficiency. The CTO managed every aspect of the product design and project management, documentation writing, agile software development with both onshore and offshore teams and successfully delivered the product to the market.

Service Type	Technical Product Management Product Owner	Technical Project Management Scrum Manager
What is it?	Requirements Analysis, system design, coding and testing management, pre-sales technical support, product roadmap management.	The application of knowledge, skills, tools and techniques to project activities to meet the project requirements.
How is it used?	Stands between the customer and the developers and translates the customer's business requirements into technical design. Develops the roadmap and recommends the technical methods to be used to get to a commercial product.	To bring an idea from concept to commercial reality. Ties together all the technical aspects of the commercial delivery of a product and ensures these are delivered on time and within budget. It takes into account the scope, quality, schedule, budget, resources and risks associated with the start up.
What expertise is required?	Needs expertise in software development management and customer facing skills. Innovative and experience dealing with fast moving technical environments.	Project management in a complex technical environment requires a good technical understanding of the products being delivered and of the different ways they can be delivered.
Expert's Experience	Carried out the requirements analysis, design, software development management, testing and commercial delivery of several commercial products.	Over 15 years of the project management and delivery of technically complex products and solutions.
